

TWO-NUMBER GENERATOR 2.0

Exact downloadable source-code handoff

Anime-inspired · 1-6 range · 36 equally likely ordered outcomes

This PDF was generated from the live files in the Replit workspace. It includes the complete text source, setup configuration, behavior contract, asset inventory, and hashes for verifying exact copies.

Generated 2026-09-03. The source artifact is [artifacts/dice-roller](#).

Exact reproduction contract

Use the attached source files verbatim. Do not replace the local fonts, WebP artwork, CSS system, timing values, storage behavior, or probability logic with approximations. The PDF contains text source; the binary assets must be copied separately from the listed workspace paths.

What the app is

A responsive React/Vite single-page generator branded as Version 2.0. It presents two numbers between 1 and 6 in a cinematic, Ultra Instinct-inspired visual system without using dice wording or dice imagery in the interface.

Behavior that must remain unchanged

Generator	Every ordered pair from 1-1 through 6-6 has equal probability: 1/36.
Timing	Generation duration is 300 ms with staggered number reveals.
Keyboard	Space bar starts a generation on desktop when focus is not in an interactive field.
History	Latest results and statistics persist in browser localStorage.
Recent results	The latest three completed results are shown with #01, #02, and #03 numbering.
Analysis	Probability modal shows actual versus expected percentages and distribution bars.
Reset	Reset requires confirmation and clears browser-local saved history.
Sanity check	Runs 100,000 diagnostic rolls without changing saved history; unusually large variance opens a warning popup.
Recheck	Fix & recheck performs a separate 200,000-roll diagnostic; it does not alter the generator algorithm.
Responsive	Touch/tablet styles reduce expensive effects for iPad and mobile performance.

Workspace-level files

The artifact is part of the existing pnpm monorepo. A new workspace should also preserve the root pnpm-workspace.yaml, root package.json, tsconfig.base.json, and the existing pnpm-lock.yaml. The lockfile is intentionally not expanded into this code-reference PDF; use the live workspace copy for dependency-exact reproduction.

Verification commands

```
pnpm --filter @workspace/dice-roller run typecheck
PORT=19731 BASE_PATH=/ pnpm --filter @workspace/dice-roller run build
git diff --check
```

Important: this PDF is a source handoff, not a replacement for the binary asset files. For the same visual result, provide both this PDF and the original artifacts/dice-roller/public directory, or provide the complete artifact folder directly.
